Estimates of relative survival rates, by cancer site

	% survival rates and their standard errors							
	5 year		10 year		15 year		20 year	
Prostate	98.8	0.4	95.2	0.9	87.1	1.7	81.1	3.0
Thyroid	96.0	0.8	95.8	1.2	94.0	1.6	95.4	2.1
Testis	94.7	1.1	94.0	1.3	91.1	1.8	88.2	2.3
Melanomas	89.0	0.8	86.7	1.1	83.5	1.5	82.8	1.9
Breast	86.4	0.4	78.3	0.6	71.3	0.7	65.0	1.0
Hodgkin's disease	85.1	1.7	79.8	2.0	73.8	2.4	67.1	2.8
Corpus uteri, uterus	84.3	1.0	83.2	1.3	80.8	1.7	79.2	2.0
Urinary, bladder	82.1	1.0	76.2	1.4	70.3	1.9	67.9	2.4
Cervix, uteri	70.5	1.6	64.1	1.8	62.8	2.1	60.0	2.4
Larynx	68.8	2.1	56.7	2.5	45.8	2.8	37.8	3.1
Rectum	62.6	1.2	55.2	1.4	51.8	1.8	49.2	2.3
Kidney, renal pelvis	61.8	1.3	54.4	1.6	49.8	2.0	47.3	2.6
Colon	61.7	0.8	55.4	1.0	53.9	1.2	52.3	1.6
Non-Hodgkin's	57.8	1.0	46.3	1.2	38.3	1.4	34.3	1.7
Oral cavity, pharynx	56.7	1.3	44.2	1.4	37.5	1.6	33.0	1.8
Ovary	55.0	1.3	49.3	1.6	49.9	1.9	49.6	2.4
Leukemia	42.5	1.2	32.4	1.3	29.7	1.5	26.2	1.7
Brain, nervous system	32.0	1.4	29.2	1.5	27.6	1.6	26.1	1.9

Reproducible examples

This is 100% normal!

Brandon Rohrer

@_brohrer_

I was just asked whether I ever have to look things up when I code. I want to go on record saying that, aside from canned white board coding examples, I can't write two lines of code without referring to Google or stack overflow. I would be lost without them.

Broken cake

Help! My cake broke!

vs.

**Help! I followed these
6 steps and my cake broke!**

**Same principle
applies to code**

Reprexes

Reproducible examples

**Something anyone can run on their computer
to reproduce the problem you're facing**

Debugging and replexes

Simplify your code down to something very basic

Add additional things until stuff breaks

Use a subset of your data or invent fake data

Restart your session and see if it runs in a new session

Ask the internet for help using your toy example

75% of the time you'll find what's wrong as you make the replex!

Making datasets with `tribble()`

```
my_data <- tribble(  
  ~animal, ~number,  
  "cat", 5,  
  "dog", 4,  
  "bear", 7,  
  "bison", 1  
)
```

```
my_data
```

```
## # A tibble: 4 x 2  
##   animal number  
##   <chr>    <dbl>  
## 1 cat      5  
## 2 dog      4  
## 3 bear     7  
## 4 bison    1
```

Example reprex

```
my_data <- tribble(  
  ~animal, ~number,  
  "cat", 5,  
  "dog", 4,  
  "bear", 7,  
  "bison", 1  
)
```

```
# This plot has a fill legend, but I want to remove it because it's redundant  
# What's the best way to get rid of the fill?  
ggplot(fake_data, aes(x = animal, y = number, fill = animal)) +  
  geom_col()  
# I add something here, but what?
```
